

NEEV SAVLA

CYBERSECURITY ENGINEERING STUDENT | SOFTWARE DEVELOPMENT

Mumbai, India | 9011713499 | neev.savla24@sakec.ac.in | github.com/neev21-alt | linkedin.com/in/neev-savla

SUMMARY

Computer Engineering student (CGPA 9.2/10) at SAKEC Mumbai focused on cybersecurity and software development. Built full-stack web applications, AI-assisted civic tools, and an ML-based deepfake detection pipeline. Seeking internships in cybersecurity, software engineering, or AI systems.

PROFESSIONAL EXPERIENCE

Frontend Developer Intern, CodeSprint Tech

Sept 2025 – Oct 2025

- Built responsive web interfaces for 4+ client projects using HTML, CSS, and JS, resolving cross-device rendering issues.
- Developed a shared UI component library that reduced redundant CSS and cut development build times across projects.
- Delivered clean, maintainable code within Agile sprint cycles using structured Git branching and PR workflows.

PROJECTS

PhishPulse — Cybersecurity Simulation Platform

Full-Stack

React, TypeScript, Python FastAPI, TailwindCSS, Framer Motion, Zustand

- Built full-stack cybersecurity awareness platform with React/TypeScript frontend and Python FastAPI backend.
- Designed interactive simulation interface with 20+ connected nodes to visualize phishing attack scenarios.
- Integrated gamified mission progression system for structured cybersecurity training workflows.

Election Guide India — Civic Tech Portal

Deployed · Vercel

[election-guide-india.vercel.app](#)

React, Gemini 2.5 Flash, Web Speech API, Web Audio API, HTML5 Canvas

- Built and deployed multilingual AI election assistant using Gemini 2.5 Flash (English/Hindi) on Vercel.
- Implemented interactive EVM & VVPAT simulator with Web Audio API beeps and 7-second paper trail.
- Integrated voice input/output via Web Speech API — submitted to Google Build with AI Hackathon (Apr 2026).

Student Management System — Secure CRUD App

Java/MySQL

Java, MySQL, Swing, JDBC

- Built role-based authentication using JDBC preventing unauthorized access to student and staff institutional records.
- Mitigating SQL injection risk using parameterized JDBC queries across all DB operations.
- Enforced server-side input validation for reliable record integrity and maintained normalized database schemas.

Deepfake Detection Pipeline

Python/ML

Python, ML Data Pipelines, Classification Models

- Built Python pipeline to clean, crop, and extract features from video datasets for deepfake model training.
- Trained classification models to identify manipulated media, improving preprocessing efficiency for large datasets.
- Benchmarked classification performance across manipulated media datasets — submitted to Intel AI Festival 2025.

TECHNICAL SKILLS

Languages: JS, TS, Python, Java, SQL

Databases: MySQL, Schema Design

Frontend: React, Vite, TailwindCSS, Framer Motion

APIs: Gemini API, Web Speech API, Web Audio API

Backend: Node.js, Express, FastAPI, JWT

Tools: Git, GitHub, Vercel, Zustand

EDUCATION

B.Tech — Computer Engineering | Shah & Anchor Kutchhi Eng. College, Mumbai

2024 – 2028 (Exp.)

CGPA: 9.2 / 10

ADDITIONAL INFORMATION

Certifications: CCNA: Intro to Networks (2025), CyberPeace First Responders (2025), OS Basics (Cisco).

Awards: C Programming (92.5%) & Python Certification (90%) — IIT Bombay.

Languages: English, Hindi, Marathi, Gujarati.
